Assignment 1

Imagine you are working on customer dashboard for an insurance company. Consider following html:

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <title>Insurance Dashboard</title>
    <style>
      .highlight {
        background-color: #e0f2fe;
      }
      .active {
        color: green;
        font-weight: bold;
      }
    </style>
  </head>
  <body>
    <h1 id="pageTitle">Insurance Customer Dashboard</h1>

    <h2>Customers</h2>
    <ul id="customerList">
      <li class="customer">Ravi - Health</li>
      <li class="customer">Anita - Vehicle</li>
      <li class="customer">Karan - Life</li>
    </ul>

    <h2>Policies</h2>
    <p class="policy">Health Insurance</p>
    <p class="policy">Vehicle Insurance</p>
    <p class="policy">Life Insurance</p>

    <form id="enquiryForm">
      <input type="text" name="customerName" placeholder="Customer
Name" />
      <input type="email" name="email" placeholder="Email" />
      <button type="submit">Submit</button>
    </form>

    
    

    <a href="#">View Policy</a>
    <a href="#">Contact Agent</a>

    <script src="asmt1.js"></script>
  </body>
</html>
```

JavaScript Exercises

This section belongs to JavaScript and DOMs section

Write JS code for all the following tasks separating them by proper JavaScript comment in asmt1.js file:

Task 1– Select by ID

- Change the dashboard title text to “Customer Insurance Overview”.

Task 2– Select by Tag Name

- Select all elements and:
 - Add a border
 - Log the total number of customers

Task 3– Select by Class Name

- Select all .policy elements and:
 - Add highlight class
 - Change text color to blue

Task 4– Select using CSS Selectors

- Select the first customer only
- Select all customers
- Mark the last customer as active

Task 5– HTML Object Collections

- Using document collections:
 - Count number of forms
 - Get number of images
 - Change text of all links to “More Info”

Task 6– Add a new customer dynamically and observe:

- Which selections update automatically?
- Which don't?

Task 7 – Attribute-Based Selection

- Select **only input fields** whose type is "text" using **CSS selectors** and:
 - Add a yellow background
 - Add placeholder text: "Enter Full Name"

Task 8 – Multiple Class Selection

- Select all elements that have **both** customer **and** active classes and:
 - Change text color to dark green
 - Add text (Priority Customer) at the end

Task 9 – Descendant vs Child Selector

- Select all elements **inside** #customerList using a **descendant selector**
- Select only **direct child** using a **child selector**

Log the difference in console.

Task 10 – Even / Odd Selection (CSS Pseudo Selectors)

- Using querySelectorAll():
 - Highlight even customers in light gray
 - Highlight odd customers in light blue

Hint: :nth-child()

Task 11 – Form Elements Collection

- Using **HTML form object model**:
 - Access the enquiry form
 - Log all input field names
 - Disable the submit button
- Hint: document.forms["formId"].elements*

Task 12 – NodeList vs HTMLCollection

- Select policies using:

JavaScript Exercises

This section belongs to JavaScript and DOMs section

- `getElementsByClassName`
- `querySelectorAll`
- Dynamically add a new policy
- Observe which collection updates automatically

Task 13 – Text Content Filtering

- Select all customers and:
 - Highlight customers whose policy includes "Life"
 - Hide customers whose policy includes "Vehicle"

Hint: `textContent.includes()`

Task 14 – Closest & Parent Traversal

- When clicking any customer `<li>`:
 - Find the nearest `<ul>`
 - Add a border to it

Hint: `closest()`

Task 15 – Complex Selector Challenge Select:

- All policy `<p>` elements except the first one and:
 - Change font style to italic
 - Prefix text with "✓ "

Hint: `:not()` and `:first-child`

❖❖❖❖ Good Luck ❖❖❖❖
